

tisoware Electronic Certificate of Incapacity for Work

Module TW-ELECTR-CIFW (tisoware.eAU)

Application module for mapping the electronic certificate of incapacity for work. The eCIFW data (German: eAU) are automatically retrieved from the statutory health insurances for each employee. The employer is notified of the beginning and duration of an employee's incapacity to work. This includes out-patient as well as in-patient treatment.

The functions described below can be used together with the following proALPHA country versions:

- BC-CV-DE (Country Version Germany)

The module is available in the following country version(s) and interface language(s) only: Germany; German and English

The prerequisite for the functionality of the above module is that the following modules have been licensed and installed: TW-TIME (tisoware.ZEIT)

The master data stipulated by the statutory health insurance are transferred from the payroll system to tisoware via an interface.

This specification sheet is valid for proALPHA ERP version 8, 9.0, 9.1 and tisoware 11.2a.

Functions of Incapacity for Work Management

- Full integration in time, workforce and workflow management
- Available as cloud or on-premises solution
- Automatic request of data from statutory health insurance
- Notification in case of new events
- Monitor maximum days without CIFW as specified by the customer
- Events of last 12 months shown in calendar
- Book various labor categories for one event in one dialog
- Statistics on the event over the last 12 months
- Alerts for maximum days without CIFW, number of days with CIFW exceeding 42 days
- Reference to occupational rehabilitation management
- Manual entry of analog events
- Transfer data to payroll accounting
